

Disabled + overcrowding

~~Little~~ There is a correlation between age + overcrowding.
The presence of children in the household is associated with the greater likelihood of overcrowding. It ranges from over a fifth of those in their 20s to only about one in 12 of those ~~of~~ ^{slightly} over 60.
~~When grouped out by age the disabled are~~
Almost the same proportion of the incapacitated as of the non-incapacitated were overcrowded at successive ages. [Source Table 15 Disability series]
— bedroom standard.
